

Rayterton Core Delivery Force Automation

The Delivery Execution Platform.

A focused suite designed to digitize your fleet operations immediately. It replaces paper run-sheets and phone calls with a system that enforces the basic discipline of logistics: Pick Up, Deliver, and Proof.

The Foundation of Last-Mile Ops.

Digitize Your Fleet Operations

Stop managing drivers via WhatsApp groups. This suite gives you total control over the dispatching and proof-of-delivery process.

Module Breakdown: The Essentials

Delivery Command Center The "Control Tower" for your Ops Manager. Visualize live fleet movement, pending deliveries, and operational bottlenecks on a single map interface.

Driver & Courier Mgmt Manage your fleet roster. Onboard new drivers, manage shifts, and maintain digital profiles of your workforce.

The screenshot displays the Rayterton Delivery Force Automation software interface. At the top, there is a header bar with the Rayterton Apps logo, the product name, and a 'Logout' button. The main interface is divided into two main sections: 'Driver Onboarding' and 'Shift & Attendance'.

Driver Onboarding: This section includes a summary of registered drivers (165), active status (138), and suspended/leave (27). It also features a search bar for driver names and a table of driver profiles with columns for Driver Profile, Contact, License & Vehicle, Rating, Status, and Action. A specific driver profile for 'Agus Pratama' is shown in detail, including license number SIM-5098 and contact number 081296613365.

Shift & Attendance: This section includes a summary of shift status (Total Scheduled: 850, CLOCKED IN: 605, LATE / ABSENT: 75, OFF DUTY / LEAVE: 170). It also features a search bar for drivers and a table of shift visualizations for drivers like Andi Abadi and Andi Hidayat, showing their clock-in times and shift details.

Stop Dispatching Into The Void.

Managing a fleet without visibility is just guesswork. If you can't see your drivers, you can't control your assets. Deploy Core DFA to eliminate blind spots. Gain full accountability and track every movement in real-time.

Smart Fleet & Cost Control Suite

The Cost Control Engine. Built to prevent revenue loss. It ensures driver accountability and uses data insights to help you lower your biggest operational costs: Fuel & Maintenance.

Total Cost Optimization.

Optimize Routes. Lock The Cash.

Once your fleet is digital, the next step is Efficiency. This layer moves beyond passive monitoring to **active control**. It forces the fleet to run on the most efficient route and ensures every Rupiah of COD money enters your bank account safely.

Module Breakdown: The Cost Controllers

Master Data Management Clean data equals clean operations. Centralize your vehicle types, service SLAs, and **operational zones** to ensure the whole network runs on one standard.

The screenshot displays the Rayterton Delivery Force Automation software interface. At the top, there are two main sections: 'Vehicle Master' on the left and 'SLA Configuration' on the right. The 'Vehicle Master' section shows a summary of the fleet: 'FLEET SIZE 500', 'READY / AVAILABLE 257', and 'ON TRIP / BUSY 166'. Below this, there is a search bar and a table of vehicle details including license plates and owners. The 'SLA Configuration' section shows a 'Standard Delivery SLA' profile with priority matrix definitions for different levels (Critical, High, Medium, Low) and their corresponding response and resolution targets. It also includes an 'SLA Simulator' for testing incident times.

COD & Cash Reconciliation. Real-time monitoring of Cash-on-Delivery collections. The system flags drivers who hold cash too long before remitting to **finance**.

Geofencing & Zones The digital fence. Define operational zones strictly. If a vehicle deviates from its assigned territory, you get an alert instantly.

Vehicle Inspection Safety is non-negotiable. Drivers *must* complete a digital checklist (brakes, lights, tires) in the app before they can start the engine. No check, no dispatch.

Logistics Network Ecosystem

A strategic suite that unifies the Network Lifecycle; Fleet Operations, Customer Experience, and Advanced Analytics.

Built for Directors and Network Managers who need to scale operations and improve customer satisfaction.

Strategic Growth & Scalability.

From Delivery to Customer Delight

This layer shifts focus from 'Moving Boxes' to 'Building a Network'. It integrates your **fleet**, your partners, and your customers into one seamless ecosystem.

Module Breakdown: The Strategy

Customer Notifications Proactive communication. Automatically send WhatsApp/SMS updates (Out for Delivery, Arrived) to reduce failed attempts and anxiety calls.

Driver Incentives Drive performance. Gamify the driver experience with scorecards based on On-Time Performance (OTP) and safe driving.

Supervisor Mobile Leadership on the go. Supervisors can monitor operations, approve expenses, and resolve escalations directly from their mobile devices.

API & Webhooks Flexible Integration. Our system is capable of integrating with your existing external software or third-party platforms whenever required.

Analytics & Heatmaps Data-driven decisions. Visualize delivery density with heatmaps, analyze Cost-Per-Delivery, and monitor SLA compliance across regions.
